Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the first intermediate conveyor (8) must be shown to be extensible in its longitudinal direction, structure of the wheel as in claim 23, the means for allowing the intermediate conveying system to pivot relative to the external conveyor as per claim 28 and the connection of the tarmac level conveying means being connected to the aircraft or the feature(s) canceled from the claim(s). No new matter should be entered. It is noted that the intermediate conveyor being examined is that of figures 1-16A, as such no new structure may be added to these drawings that is not already supported by the specification.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New

Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 5, 21, 23, 25 and 27-29 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the various structure as pointed out as missing from the drawings, does not reasonably provide enablement for this structure in the elected embodiment of the invention. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. It is not clear how the element (8) is extendable, how the tarmac conveyor connects to the aircraft when it does not reach the aircraft. Only structure that is found in Figures 1-16a is to be examined as this is the elected species. If applicant wishes to continue with no elected structure they should file statements to the effect that they are obvious variants of the elected species. Otherwise they are required to maintain structure that is in keeping with the original election. No art rejections are being set forth at this time in order to allow the applicant to clarify their position. This action is being made non-final for the same reasons. Clarification is required.

Response to Amendment

Amendments filed on July 10, 2008 have been entered into the record.

Response to Arguments

Applicant's arguments with respect to claims 1 and 21 have been considered but are moot in view of the new ground(s) of rejection. The claims must be presented in terms that deal with the elected species as set forth in Figures 1-16a.
